eVOQUA
WATER TECHNOLOGIES

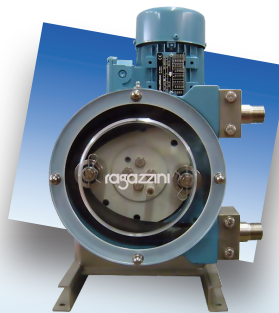

ESE installs and services many products in the Evoqua family of water treatment products. Wallace & Tiernan® leads the way in chlorine application, monitoring, and testing.

Scaletron is a leading manufacturer of corrosion resistant electronic digital and mechanical scales and accessories. Combining this technology with that of Evoqua allows ESE to simplify the disinfection needs of your water or wastewater plant.

Along with W&T®, ESE handles OSEC® Hypochlorite Generation Systems. OSEC® systems use an inexpensive brine solution to generate hypochlorite onsite.

Keco manufactures self priming seal-less, drainable peristaltic hose pumps with minimal lubrication requirements.

SERVICE

ESE also services all equipment we install and can offer maintenance contracts that prolong the life span of the equipment, limiting downtime of your plant. We may also be able to service your existing equipment, give us a call to set up an appointment with one of our service technicians.
